

Cool Neighbourhoods is a community-driven program focused on helping citizens increase their neighbourhood's resiliency and sustainability and decrease energy consumption.

The program began through the experience of homeowners in West Vancouver who came together to find a way to do something about climate change and looked at ways to decrease their electricity and natural gas use.

In the process, they came together as neighbours, learning together, making changes, and having fun.

The idea of working together to improve the efficiency and comfort of their homes, while increasing the connectedness of their community, has since spread to other neighbourhoods on the North Shore. The program is now run by Cool North Shore.

Cool North Shore facilitates homeowners in hosting get-togethers to discuss and learn about areas of home energy savings and improvements. Experts and contractors can answer questions on retrofits, home energy assessments and rebate programs. Free thermal imaging can also be arranged to discover key areas of home heat loss.

Cool North Shore invites you join the Cool Neighbourhoods program and bring your neighbours together to decrease your energy use, increase the comfort in your home, and have some fun!
